Hands and indications

B SETTINGS

Three-position crown

I — Running and manual winding

Normal position. Turn the crown upwards to wind the watch by hand. On the wrist, the movement winds itself.

II — Quick date and 24-hour hand setting

Turn the crown one way to advance the date, the other way to set the 24-hour hand to the second time zone.

III — Time setting

The seconds hand stops so you can set the time to the second. The date changes when the hands pass midnight: to be sure of morning or evening, move them until the date changes, then set the time.

Never correct the date between 10 p.m. and 4 a.m.

The date mechanism is then engaged: a correction can damage it. First move the hands outside this period (position III), then set the date (position II).

C SECOND TIME ZONE

24-hour hand

The hour and minute hands show local time. The 24-hour hand turns once a day and shows the time in a second zone on the 24-hour scale, with no confusion between day and night.

> Example: you are in Reykjavik and it is 10 p.m. Set the 24-hour hand to 18: it shows the time in New York.

Depending on the model, the rotating bezel carries city names. Place the city of the second time zone under the 24-hour hand: you can then read the time in the other cities against the 24-hour scale.

WINDING

Worn every day, the watch winds itself. After a few days off the wrist, give it 20 to 30 turns of the crown in position I.

WATER

Never operate the pushers or the crown under water, and always push the crown back to position I.
